

Maryam Amir

Full-Stack Developer (React + Django)

✉ maryamamir.dev@gmail.com ☎ +92 326 4769007 📍 Lahore, Pakistan 🔗 LinkedIn 🐙 Github

Summary

Full-Stack Developer (React + Django) with hands-on experience building production SaaS features, including dashboards, authentication flows, and data visualizations. Strong foundation in JavaScript, REST API integration, and performance optimization, developed through internship work and self-driven full-stack projects. Seeking to grow into a junior level engineering role while contributing to scalable, user-focused applications

Experience

Frontend Developer, Utility Access Services 

05/2026 – 07/2026
Lahore, Pakistan

- Reduced duplicate UI code across client-facing modules by an estimated **30%** by building a reusable React component library for a multi-tenant POS SaaS platform.
- Strengthened platform security by implementing JWT-based authentication flows, protected routes, and role-based access control across **3+ user roles**, integrated with backend REST APIs.
- Improved visibility into real-time business metrics for platform users by building **5+ interactive dashboards** using Recharts and GSAP.
- Reduced unnecessary API re-fetches by an estimated **20%** by optimizing data-fetching patterns and implementing token refresh logic with React Query.
- Improved sprint delivery consistency by collaborating in a **2-week Agile sprint cycle**, using Git, Docker, and PostgreSQL/Supabase across the full development lifecycle.

Education

Bachelor of Science in Information Technology (BSIT),
Superior University, Gold Campus

2023 – 2027
Lahore, Pakistan

Skills

Core Stack:

- React.js
- JavaScript
- TypeScript
- Django REST Framework
- PostgreSQL

Backend & Auth:

- Python
- JWT (SimpleJWT)
- REST API Design
- Supabase

Frontend:

- Tailwind CSS
- TanStack Query/Router
- Context API
- Framer Motion
- GSAP

Tools:

- Git/Github
- Docker
- Axios
- Vite
- Vercel/Render/Netlify

Projects

StudySync – Collaborative Academic Platform 

Tech Stack: React, Vite, Tailwind CSS, Django, DRF, PostgreSQL, TanStack Query, TanStack Router

- Built a **full-stack collaborative platform** enabling users to create communities, publish content, and engage in discussions
- Implemented **type-safe routing and optimized state management** using TanStack Router and TanStack Query
- Developed a **real-time threaded discussion system**, improving user engagement and interaction
- Integrated **secure JWT authentication** and REST APIs using Django REST Framework
- Designed an **interactive analytics dashboard** to track user activity and engagement

Movixxx – Movie Search App [🔗](#)

Tech Stack: React.js, Tailwind CSS, OMDb API

- Cut redundant API calls by **~40%** by implementing search debouncing, improving app responsiveness under real-time queries.
- Built a **persistent watchlist** feature using **Context API and localStorage**, enabling state retention across sessions.
- Delivered a **responsive, sortable UI** with loading states, **reducing perceived load time** for users on slower connections.

Stylique – E-commerce Website [🔗](#)

Tech Stack: React.js, Tailwind CSS, Context API, React Router, Fake Store API

- Built a full cart-and-wishlist system with **persistent storage using Context API**, supporting uninterrupted shopping sessions.
- Structured scalable client-side routing across **10+** views for a seamless multi-page shopping experience.
- Designed a **mobile-first UI** with **reusable components**, reducing duplicate styling code across product pages.
